PLUM
gas solutions

Plum Smart Station

Engineered for Performance

- Commercial CNG loader/unloader engineered for high-efficiency operations in virtual pipeline (VP), RNG, and gas lift applications.
- Designed to support simultaneous loading and unloading of multiple trailers.
- It has automated switching, built-in measurement compliance, and fully self-contained operation.
- Streamlines gas transfer while maintaining accuracy and safety across complex operations.

FEATURES & BENEFITS

- **4-Lane Auto-Switching, Off-Grid Ready:** Load/unload up to four CNG trailers anywhere - no external power required.
- **Dual Function Configuration:** Supports upstream operation for pipeline injection or downstream use for trailer filling, adding flexibility across various deployment scenarios.
- **Smart HMI Interface:** Drivers can easily input company, trailer, and load ID for accurate tracking—streamlining operations.
- **Certified Mass Flow Measurement:** Equipped with a mass flow meter and designed for Measurement Canada and NTEP approvals, ensuring accurate gas volume tracking for billing and regulatory compliance.
- **Optimized for Gas Lift Operations:** Enables controlled CNG injection into production wells, improving artificial lift efficiency and reducing downtime.
